

Title **Homelessness security and access**

---

Service Area **Housing and Community Safety**

---

Estimated Savings **£85,000**

---

### Summary

This project will electronically interconnect the four homelessness blocks to integrate the CCTV, security doors and telecom systems so that secure access can be remotely operated from Hallpark. This integration will allow staff based at Hallpark to monitor and operate the CCTV and security doors of all remote blocks, as well as contact all of these properties. Savings will accrue from the reduction of concierge staff at the three remote blocks.

### Impact

This project requires the communication system between the four homeless blocks to be upgraded.

The proposed change will improve efficiencies in the service by having a uniform and integrated service for security across all of the homeless blocks.
